

Dr.Sherlock^{GRAPH} 2007

TEMPERATURE ALARM

- Monitoring of 10 temperature inputs + outdoor temperature
- Alarms are not only to be triggered by high and low temperature, but also relative to normal set temperature (estimated automatically).
- High, relative temperature alarm events may be suspended by high outside temperatures.
- Less important alarm events may be shown only on the panel or suspended in the nighttime.
- Data logging. Temperatures may be shown on line charts. Connects to PC via RS485/USB. Alarm log shows 200 events in display.
- Built-in Dr.Bell Speech Processor tells you the cause of the alarm situation in clear speech and SMS via phone. All operations may also be done from a phone, commands/speech or SMS
- Automatic testing function
- Input names may be named by user.
- Easy to use with a perfect palette of menus.
